

Asmir Pljakić

FULL STACK DEVELOPER

Professional Profile

Highly motivated and detail-oriented Full Stack Developer with a strong foundation in the MERN stack (MongoDB, Express, React, Node.js) and React Native. Passionate about writing clean, maintainable code in TypeScript and JavaScript, and eager to build responsive, user-centric applications. A quick learner and strong team player, actively seeking to contribute to a collaborative engineering team while continuing to grow and adopt industry best practices.

Work Experience

Founder & Lead Instructor

2023 – Present

@skolaprogramiranja.rs

- ▶ Founded and manage a highly successful programming school, creating comprehensive curricula for modern web and mobile development.
- ▶ Mentored dozens of students from zero knowledge to securing professional Software Engineer roles in companies across Serbia, Austria, Germany, and the USA.
- ▶ Cultivated a strong online presence by simplifying complex software architecture concepts for aspiring developers.

TECHNICAL SKILLS

Frontend & Mobile

React React Native

TypeScript

JavaScript (ES6+)

Tailwind CSS

Backend & Databases

Node.js Express.js

MongoDB Mongoose

REST APIs

Tools

Git / GitHub Postman

EDUCATION

MSc Info. Systems & Tech

Alfa University (2018 - 2020)

BSc Computer Science

University of Novi Pazar (2012 - 2018)

LANGUAGES

English	Professional (B2)
Serbian	Native

Full Stack Developer

2022 – Present

NEXT TECHNOLOGY DOO

- Assisted in the development of data-driven web applications using React, focusing on building reusable, accessible UI components.
- Collaborated with the backend team to integrate Node.js/Express REST APIs with the frontend, ensuring smooth data fetching and state management.
- Participated in optimizing search and filtering mechanisms for large datasets, improving overall application responsiveness.
- Maintained code quality using Git version control and actively participated in agile team ceremonies and code reviews.

Frontend Developer (POS Project)

2022 – 2023

NEXT TECHNOLOGY DOO

- Contributed to the front-end development of a Point of Sale (POS) software and its associated desktop applications.
- Gained hands-on experience implementing complex business logic, specifically focusing on dynamic invoice processing components.
- Worked closely with senior developers to troubleshoot bugs, fix UI issues, and translate client requirements into functional code.

Notable Projects

Shop-IT v2 (E-Commerce)

React, Redux, Node.js, MongoDB

A modern, full-stack web shop built with React and Redux Toolkit. Features an intuitive interface, secure transactions, product filtering, and a custom backend REST API.

[View Source Code](#) →

JobHub Platform

React, Node.js, REST API

An innovative application designed to connect job seekers with employment opportunities, featuring advanced search and a responsive, fast user interface.

[View Source Code →](#)

React Native Shop

React Native, TypeScript

A cross-platform mobile e-commerce application focusing on smooth animations, strong typing with TypeScript, and a mobile-first user experience.
