

# Emir Bihorac

## FULL STACK DEVELOPER

### Professional Profile

Highly motivated and detail-oriented Full Stack Developer with a strong foundation in the MERN stack (MongoDB, Express, React, Node.js) and React Native. Passionate about writing clean, maintainable code in TypeScript and JavaScript, and eager to build responsive, user-centric applications. A quick learner and strong team player, actively seeking to contribute to a collaborative engineering team while continuing to grow and adopt industry best practices.

### Work Experience

#### Software Engineering & Code Architecture

2026 - Present

##### Elegant Code

- ▶ Data Manipulation: Expertise in working with objects and arrays (algorithmic optimization through methods like map, filter, reduce, sort, every, some).
- ▶ Flow Control & Optimization: Efficient asynchronous programming (Promises, Then/Catch, Try/Catch), code refactoring for improved performance, and project structure management utilizing Monorepo architecture.
- ▶ Local Storage: Client-side data management using LocalStorage mechanisms.

### TECHNICAL SKILLS

#### Frontend & Mobile

React

React Native

TypeScript

JavaScript (ES6+)

Tailwind CSS

#### Backend & Databases

Node.js

Express.js

MongoDB

Mongoose

REST APIs

#### Tools

Git / GitHub

Postman

# EDUCATION

## Private Programming classes

ElegantCode (2023 - 2026)

## Natural Sciences and Mathematics Program

High School Gymnasium (2022 - 2026)

# LANGUAGES

|         |                   |
|---------|-------------------|
| English | Professional (C1) |
| Serbian | Native            |

## Full Stack Developer

2024 - 2026

@skolaprogramiranja.rs

- ▶ End-to-end development of cross-platform mobile applications. Seamless integration of the mobile client with custom Node.js/Express backends, ensuring high performance and smooth data synchronization.
- ▶ Node.js & Express: Designing and developing robust RESTful APIs. Implementing modular architecture through clearly defined routing, Controllers, and custom Middleware functions (including pagination, authentication, and validation).
- ▶ Databases (MongoDB & Mongoose): Database schema design (Models). Executing advanced CRUD operations, query optimization, and working with complex search and update methods (e.g., find, findOne, findOneAndUpdate).

## Frontend Development & UI/UX

2023 - 2024

@skolaprogramiranja.rs

- ▶ React Ecosystem: Building complex Single-Page Applications using React (Hooks, custom components, Context API). Global state management using Redux Toolkit and re-render optimization.
- ▶ Languages: Deep understanding of modern JavaScript (ES6+ standards, asynchronous programming, destructuring) and transition to strictly typed code using TypeScript (TS/TSX) for enhanced stability and scalability.
- ▶ Structure & Design: Thorough understanding of HTML5 semantics and structure. Advanced layout control via CSS (Flexbox, CSS Grid, Absolute/Relative/Fixed positioning). Rapid and responsive development using Tailwind CSS and Bootstrap, enriched with fluid animations via the Framer Motion library and icon integration (FontAwesome).

## Notable Projects

---

### Shop-IT v2 (E-Commerce)

React, Redux, Node.js, MongoDB

A modern, full-stack web shop built with React and Redux Toolkit. Features an intuitive interface, secure transactions, product filtering, and a custom backend REST API.

[View Source Code →](#)

### JobHub Platform

React, Node.js, REST API

An innovative application designed to connect job seekers with employment opportunities, featuring advanced search and a responsive, fast user interface.

[View Source Code →](#)

### React Native Shop

React Native, TypeScript

A cross-platform mobile e-commerce application focusing on smooth animations, strong typing with TypeScript, and a mobile-first user experience.
